Clearances: Reliability Status (Government of Canada) · CJIS clearance in 20+ US states

SUMMARY

Software Engineer II at Versaterm Public Safety, on the computer-aided dispatch software 911 centres use across Canada and the US. Went from technical support to engineering in under a year. Co-lead the team fixing customer-reported bugs, 80+ in three months. Built the Claude Code plugin we develop and review with.

EXPERIENCE

Versaterm Public Safety — Ottawa, ON
Software Engineer II — Mar 2026 – Present

- Co-lead a two-person team on customer-reported bugs in the dispatch software: 80+ fixed in three months (Genero4GL, C#/.NET, Informix, PostgreSQL).
- Built cad-dev-loop, a Claude Code plugin with 10+ skills. It takes a ticket from approach to pull request and stops for engineer sign-off before each big decision. Four engineers on the team use it. It let two people close 80+ bugs in three months.
- Rebuilt a legacy interface service in .NET with Claude Code at the 2026 company hackathon and presented it to the whole company. It shipped in the product.
- Run a show-and-tell on working with AI for the engineering team every other week.

Technical Support II — Apr 2025 – Mar 2026

- Resolved 200+ tickets across the desktop, mobile and messaging products (C#, React, Genero4GL). Worked directly with police and fire staff and with every internal team.
- Covered the after-hours on-call rotation and took 30+ calls.
- Trained my replacement with a two-week technical onboarding that ended in a final project.

Industrial Electrical & Mechanical — Ottawa, ON
Industrial Electrical Apprentice — May 2024 – Mar 2025

- A planned stint in the family electrical business between software roles. Installed and maintained electrical systems in quarries and wash plants around Ottawa.

Wicket — Remote
Junior Software Developer — May 2021 – Nov 2023

- Built features in React and Ruby on Rails for a member-data platform used by associations across Canada and the US. Started as an 8-month co-op and stayed on while finishing my degree.
- Sped up the Organizations and People resources, which hold up to hundreds of thousands of records, by paginating their queries.
- Wrote and maintained 90+ Cypress end-to-end tests that ran in CI on GitHub Actions.
- Co-wrote Python scripts that sanitize client data for new environments: 5 to 10 hours saved per client setup.

PROJECTS

InProgress github.com/Aiden-Molyneaux/InProgress — TypeScript, Fastify, SQLite, React, MCP

- A local dashboard for running several Claude Code sessions across projects at once. Hooks brief each session and a background agent records progress over MCP. A lead session reviews what changed and hands out the next steps. Built with shipwright.

InGame aidenmolyneaux.com/#ingame — React Native, Expo, Express, PostgreSQL

- An iOS and Android app for collecting and sharing the games you play, styled as a retro arcade trophy case. Version two is pre-beta, built with shipwright. The spec, contract and design system came before the code.

shipwright github.com/Aiden-Molyneaux/shipwright — Claude Code

- A toolkit for starting new projects with Claude Code: starter spec, contract and design docs, sign-off gates and reviewer skills that check the design, the running app and the code. InGame, InThink and InProgress were built with it.

SKILLS

Languages: TypeScript, JavaScript, C#, Python, Ruby, SQL
Frontend: React, React Native, Expo, WPF
Backend & Data: Node.js, .NET, Ruby on Rails, PostgreSQL, Informix, SQLite, Redis, AWS (Lambda, S3)
AI tooling: Claude Code (plugins, skills, subagents, hooks), Claude API, MCP
Tools: Git, GitHub, GitHub Actions, Jira, Docker, Cypress, Playwright

EDUCATION

Carleton University — Ottawa, ON
Bachelor of Computer Science, Specialization in Mobile Computing — Sep 2019 – Jun 2024
